Zeno Pro Intrusion Alarm System

WIRELESS, TWO-DIRECTIONAL, BUILT-IN

QUICK INSTALLATION WITHOUT MASONRY INTERVENTIONS

Thanks to the **wireless mode**, Zeno Pro does not need to cut any additional chases in the walls for its installation.

It is the ideal intrusion alarm system to be installed in renovated rooms of the house.

PERFECT INTEGRATION, EVEN WITH WIRED SYSTEMS

Zeno Pro wireless devices, such as detectors, sounders and controls perfectly dialogue with Urmet's **wired systems of line 1068** through the relevant interfaces 1068/011 and 1068/017.

Therefore, it is possible to equip the house with a **unique and centralised security system**.

SUITABLE FOR:

- SMALL SHOPS
- APARTMENTS AND INDEPENDENT HOUSES
- HOLIDAY HOMES
- GARAGES

HIGH PERFORMANCE TECHNOLOGY FOR A PEACEFUL LIFE

- **Two-directional technology** for highly reliable communication: devices constantly dialogue with the control unit to confirm the accuracy of transmitted data.
- **Anti Jamming function:** radio frequency interference detection.
- **Check of wireless signal** available on the field.
- **Device supervision** to always ensure the correct operating status.
A periodic check able to detect an anomaly such as the lack of response of a device.
- **Integrated IP and 4G communicators** for high-speed transmission of data, voice messages or text messages in case of alarm.
- **Wi-Fi connection** for system local programming and management.
- **For the user:** www.myzeno.urmet.com web portal to manage the system also from the PC with all the functions of the **MyZeno app**
- **For the installer:** web panel to programme the Zeno Pro system through the direct connection to the control unit from the PC.
- **Video check:** alarm notification with photo attachments.
- **Multilingual menu:** Italian, English, German and French.
- **Compatibility with Alexa and Google Home voice assistants**, sending of voice commands to enable and disable the system.
- Safety compliant with **EN50131 class 2**.

Ready on the smartphone: the MyZeno App

The MyZeno App allows **controlling your alarm system** in a simple and user-friendly way **via smartphone or tablet**.

It is possible to display the status of the system and activate or deactivate it totally or partially. Not only **intrusion alarm**, but also **video surveillance**.

The App is free of charge and allows you to:

- Activate, deactivate and split the system.
- Display the status of the devices in the system.
- Display the images of an alarm event or on request.
- Display the event log.
- Change the main password.
- Change users' codes.
- Disable the devices.
- Configure e-mails and push notifications to which the reports are to be sent.

Available for
iOS and Android

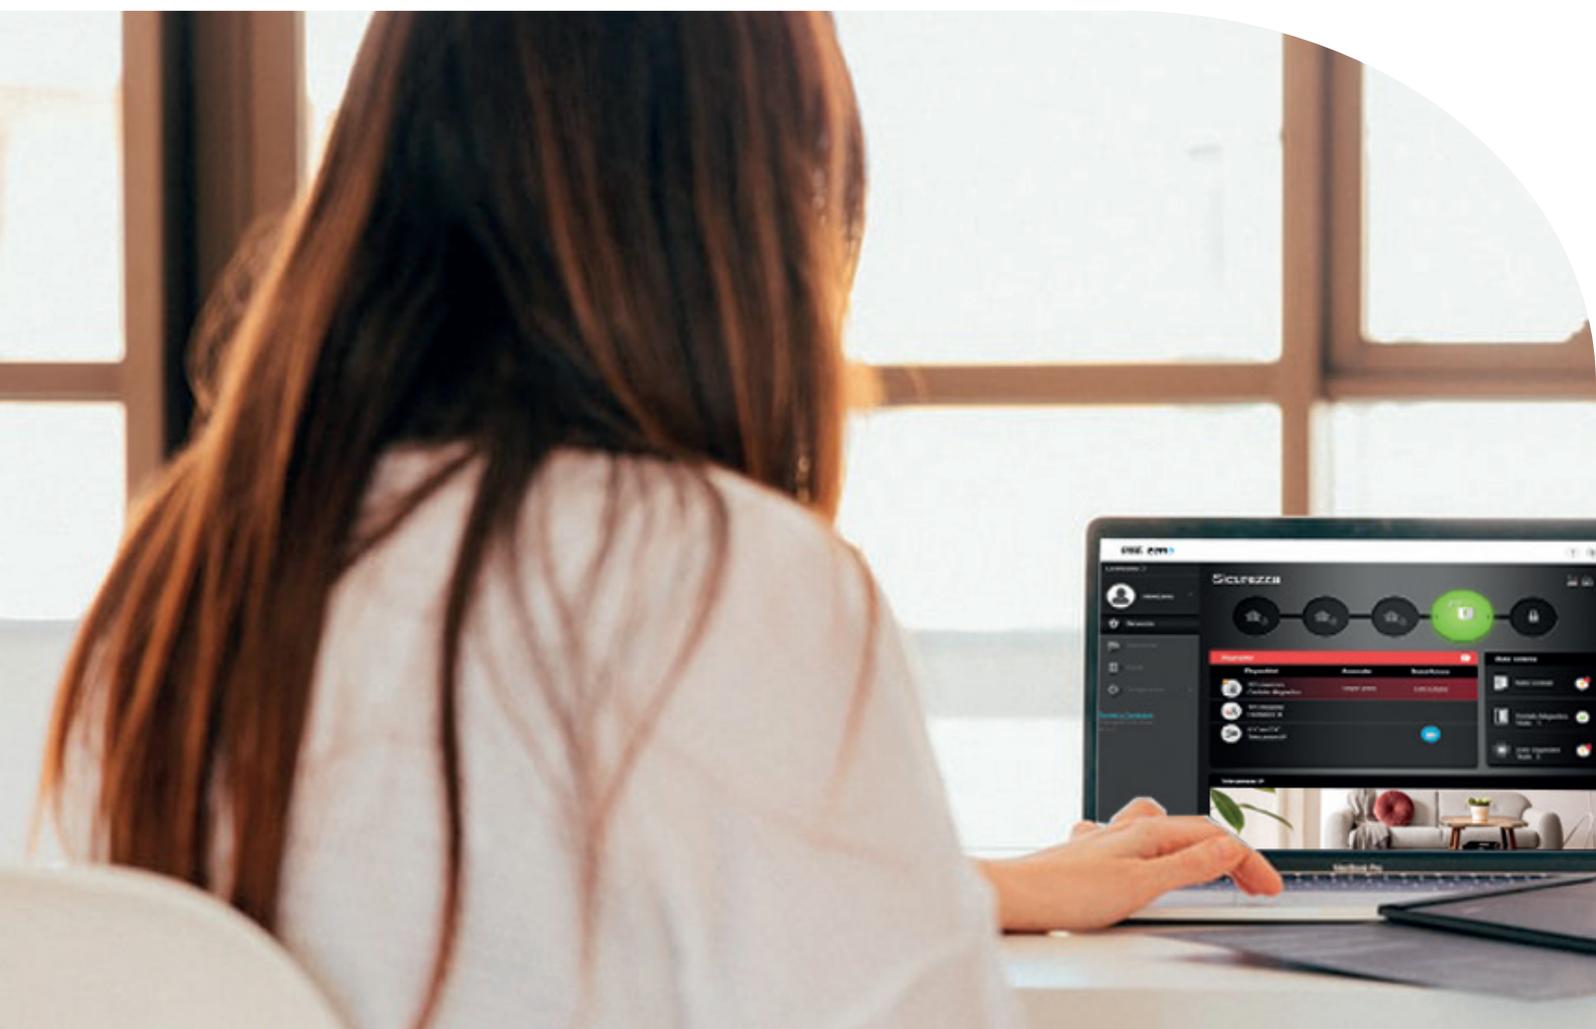

Managing the system also from the PC

The www.myzeno.urmet.com web portal allows controlling and managing your alarm system from the PC comfortably from your office or any other place. The web portal allows displaying system status, enable or disable it totally or partially, check and manage any event and **checking your house in real time**, at any time.

From the web portal, you can:

- Activate/split/deactivate the system.
- Display the status of the devices in the system.
- Display the last 200 events, videos e photos.
- Configure new users and new codes.
- Display basic system information.
- Configure some device parameters (such as detectors' disabling).
- Change the password.
- Configure e-mails and push notifications to which the reports are to be sent.
- View the images being filmed by the cameras in real time.

Still more advantages for the installer

Through the ethernet port present in the control unit, the installer can locally **connect directly to the Zeno Pro control unit**: the **Finder** app (which can be downloaded for free from Urmet website) allows the immediate connection to the installed control unit. After entering the password, the browser allows accessing the web panel from which you can **programme and configure the control unit** in every detail.

From the web Panel, you can:

- Learn and configure the devices.
- Programme system parameters.
- Display system information.
- Programme control unit parameters.
- Programme network parameters.
- Programme APNs and phone numbers.
- Set the reports.
- Display the event log.
- Update control unit firmware.

The numbers of Zeno Pro flexibility

- 3 splittable zones
- 80 radio devices that can be freely paired
- 20 configurable users (through codes and remote controls)
- 10 activation codes
- 200 storable events
- 6 devices with camera
- up to 3 recordable photos during and after an alarm event.

THERE IS ALWAYS ONE MORE REASON TO CHOOSE ZENO PRO

Easy programming: thanks to the automatic recognition of peripheral devices by the control unit, you have only to press a button on the device to be acquired.

Security under control: all information is displayed on the control unit display.

Range: 2 km in free range

High connectivity: sending of voice alarms, text messages, images, e-mails, CID and SIA numeric protocols.

TRY THE KITS STRAIGHT AWAY!

Kits represent the basic solution to appreciate the quality of Zeno Pro: **they can be enlarged with other wireless devices** to create an intrusion alarm system meeting any installation need.
